

**Summary of Clarifications**

**30.09.2015**

**Question 1:** Will the new register have the same view as the existing?

**Reply:** View will not be the same as the existing one (view will be different, depends from indicators/variables which will be analysed/searched). It is possible that all registries will have various (not unique) views, because of differences in types of data, reports, types of visualization/graphs and other types of inputs.

**Question 2:** Does the current website have search engine able to combine various data from the database? Does it need to be provided?

**Reply:** No, we don't have it, it's necessary to provide it.

**Question 3:** Do we need to change something in user/admin cabinet (if it exists)?

**Reply:** Yes, it could be changed. Most important option would be that administrator can easily add new type of reports inside of reports. Example: in register of public procurements, inside category „po naručiocu“, option to add new report – „vrednost ponuda po naručiocu“.

**Question 4:** How do you plan to update your registers? Is it some import/export feature we need to provide?

**Reply 4:** Each register should have own import – export function and possibility to import data from CVS files. Structure and type of data may be different for each register.
