

Summary of the Clarifications for ITB SER 06 2019

Question 1: On page 22 of the document "ITB SER 06 2019 Annex C - Technical Compliance Form", you stated the following:

"On remote locations, in each courtroom, there is a large TV screen on mobile platform, a video conference end point with three cameras and three microphones covering 3 positions in the courtroom: judge, prosecutor and defence attorney.

In addition, an LCD control panel is available for the judge or a court clerk, for easy operation of the basic system functions.

In each court, in the special room for vulnerable witness there is a large TV screen on the wall mount, a video conference end point that integrates the camera, microphone and remote control. In addition, an LCD control panel is available. Optionally, distortion of video and audio signal for the purpose of witness protection should also be provided as functionality."

Can you clarify the correlation between the text and the table showing like options 1, 2 and 3 of the document "ITB SER 06 2019 Annex D - Price Format" of the tender documentation?

It's this way, it's impossible to get the right configuration that meets the technical needs of remote locations that each courtroom has at least one special room.

Reply: *We have compared the text from - ITB SER 06 2019 Annex C - Technical Compliance Form with the tables from - ITB SER 06 2019 Annex D - Price Format in order to identify any discrepancies that could have an impact on configuration of the system. As a result we have discovered 3 issues that we will correct:*

1. *In all 3 options description of the system for four locations contain 2 TV's instead of 1. TV 65" with Mobile Stand is for the courtroom (3 cameras + 3 microphones) while smaller TV 49" with Mobile Stand is for the witness room (1 camera + 1 / 2 microphones)*
2. *Each remote location (1 courtroom + 1 witness room) requires only one 8-Port Gigabit Smart PoE+ Switch with 2 SFP Slots so it is inserted only in option 1 so it is not necessary to separately specify this device in options 2 and 3*
3. *Description of additional sets in options 2 and 3 should be corrected because they do not correlate with descriptions of the main set for video conference from the same table*
 - a. *Option 2 should be as follows: Set of Video Conferencing System with 1 Camera and 2 microphones (row 1) and Additional Set of Video Conferencing System with 1 Camera and 2 Microphones (row 2)*
 - b. *Option 3 should be as follows: Set of Video Conferencing System with 1 Camera and 1 microphone (row 1) and Additional Set of Video Conferencing System with 1 Camera and 1 Microphone (row 2)*
